

Pipeline index

Compare the same assumptions across deals.

Use multi-deal-pipeline.csv for one property per row. Record your source and date for rent, taxes, insurance, and financing. Leave unknowns blank rather than treating them as zero.

Keep asking price separate from your proposed purchase price. Annualize rent, vacancy, expenses, debt service, and reserves consistently before comparing cash flow.

$\text{NOI} = \text{annual scheduled rent} \times (1 - \text{vacancy rate}) - \text{annual operating expenses}$. Before-tax cash flow after reserves = $\text{NOI} - \text{annual debt service} - \text{annual capital reserve}$.

Use the next action and decision columns to distinguish research, hold, reject, and further diligence. A high estimate is not a reason to skip a missing inspection or financing condition.

Pack map: Freedom Number; market screen; conservative underwriting; annual review; management scorecard; investment policy; stress test; BRRRR exit-first; rehab walk; appraisal prep; refinance timeline; CPA questions.

Property to investigate next: _____ Missing evidence: _____

Next action / owner / due date: _____

Freedom Number worksheet

Define the target before estimating how to reach it.

Monthly household spending target: \$_____ Additional monthly buffer: \$_____

Reliable monthly non-rental income available for that target: \$_____

Monthly gap = $\max(0, \text{spending target} + \text{buffer} - \text{non-rental income})$: \$_____

Annual gap = monthly gap x 12: \$_____. Keep personal taxes and health costs visible in your spending plan; discuss estimates with qualified professionals.

Conservative annual cash flow per property, after debt service and capital reserves: \$_____

Illustrative property count = annual gap / positive annual cash flow per property, rounded up: _____. If estimated cash flow is zero or negative, this ratio is not meaningful.

This count is a planning simplification, not a purchase target or a guarantee. Properties differ; vacancies and major repairs may occur together.

Cash reserve target: \$_____ Time available to manage: _____ hours/month

What would require changing the plan? _____

Market screening checklist

Collect evidence before selecting a neighborhood.

☐ Define the geographic boundary, property type, and intended tenant use.

☐ Record several comparable rentals with dates, condition, concessions, and time listed. Distinguish asking rents from signed lease evidence.

☐ Research employment concentration, access to daily needs, and competing rental supply. Record sources; do not assume historical trends will continue.

☐ Check local rental licensing, inspection, zoning, occupancy, and landlord requirements with official sources and qualified local counsel.

☐ Obtain insurance indications and investigate flood, fire, storm, and other property-specific hazards.

☐ Verify taxes and possible reassessment after purchase. Review utility responsibility, HOA restrictions, and special assessments.

☐ Ask local managers about leasing time, service costs, tenant turnover, and operational constraints.

Market / research date: _____ Sources: _____

Unanswered questions / reason to pause: _____

Conservative underwriting checklist

Make the assumptions visible and consistent.

☐ Separate verified documents from estimates. Date every key input and record its source.

☐ Use supportable monthly rent; include vacancy and collection loss. Do not treat a seller pro forma as a lease.

☐ Include taxes, insurance, owner-paid utilities, management, routine repairs, HOA costs, licensing, and other recurring operating costs.

☐ Include management cost even if initially self-managing. Keep capital replacements in a separate reserve to avoid hiding them.

☐ NOI excludes loan payments, depreciation, income taxes, and capital expenditures. State your convention when comparing reports.

☐ Use actual proposed principal-and-interest payments and financing fees. Do not count tax/insurance escrow twice.

☐ Cash invested includes down payment, closing, initial rehab, and initial reserves; do not use down payment alone.

☐ Test lower rent, higher vacancy, repairs, insurance changes, and financing changes. Identify the cash needed to cover shortfalls.

☐ Confirm inspection, title, lease, insurance, and lender conditions before a commitment.

Weakest assumption / next evidence needed: _____

Annual portfolio review

Compare your plan with what actually happened.

Review year: _____ Properties reviewed: _____ Records reconciled on: _____

Annual scheduled rent \$ _____ / collected rent \$ _____ / vacancy and loss \$ _____

Operating expenses \$ _____ / NOI \$ _____ / debt service \$ _____ / capital work \$ _____

Cash flow after actual capital spending \$ _____ / budgeted cash flow \$ _____

Compare actual capital spending with your reserve funding separately; do not subtract both as though they were the same expense.

Reserve balance \$ _____ / upcoming replacements \$ _____ / reserve gap \$ _____

Loan balances, rate resets, maturity dates, and covenants: _____

Lease expirations, insurance renewals, inspections, and compliance dates: _____

Concentration risks by market, employer, property type, and lender: _____

Keep / investigate / improve decision, evidence, owner, and next review date: _____

Management scorecard

Review service quality, not just a single return metric.

Property / manager / review period: _____

For each area, write the agreed standard, observed result, evidence, and follow-up. Use 1 = needs attention, 2 = mixed, 3 = meets agreed standard; N/A if not measured.

Leasing: time to lease, documentation quality, and approved concessions. Score ____ Evidence ____

Collections: timeliness, arrears follow-up, and accurate reporting. Score ____ Evidence ____

Maintenance: response time, approval process, completion, and invoices. Score ____ Evidence ____

Resident communication: responsiveness and fair, consistent treatment. Score ____ Evidence ____

Financial reporting: reconciliations, receipts, and reserve visibility. Score ____ Evidence ____

Compliance: licensing, inspections, notices, and document retention. Score ____ Evidence ____

Follow-up action / responsible person / deadline: _____

Do not collect unnecessary tenant personal information in this worksheet. Review against your management agreement and applicable requirements.

Investment policy statement

Write your own decision rules before a tempting listing appears.

My purpose for rental ownership and the role it plays in my wider finances: _____

Property types and markets I understand; those I will avoid: _____

Time I can commit, and work that must be delegated: _____

Maximum cash committed per property and portfolio reserve minimum: _____

Financing constraints, rate-reset tolerance, and maturity concentration limits: _____

Required evidence for rent, condition, operating costs, and exit assumptions: _____

Circumstances requiring independent professional review: _____

Reasons to reject a deal even if the headline numbers appear attractive: _____

Review frequency, triggers for a sale review, and who may challenge my assumptions: _____

Date / version / next review: _____

Stress-test sheet

Ask what happens when several assumptions disappoint.

Create base, downside, and severe-but-plausible columns in your own spreadsheet. Choose changes from local evidence; no preset shock is appropriate for every property.

	BASE	DOWNSIDE	SEVERE
Monthly rent	\$_____	\$_____	\$_____
Vacancy rate	_____%	_____%	_____%
Annual operating costs	\$_____	\$_____	\$_____
Annual debt service	\$_____	\$_____	\$_____
Annual capital reserve	\$_____	\$_____	\$_____

NOI = monthly rent x 12 x (1 - vacancy) - annual operating costs.

Cash flow = NOI - annual debt service - annual capital reserve. Results: \$____ / \$____ / \$____

Liquid reserve available: \$_____. If monthly cash flow is negative, rough shortfall coverage in months = available reserve / absolute monthly shortfall. One-time shocks reduce available reserves first.

Add a one-time repair, leasing delay, or refinance failure. Action required and cash source: _____

This simplified model excludes tax effects and assumes expenses do not vary automatically with occupancy. State any changes you make.

BRRRR exit-first worksheet

Plan for the refinance to be smaller, later, or unavailable.

Purchase \$_____ + rehab \$_____ + contingency \$_____ + holding costs \$_____

+ acquisition closing costs \$_____ = total project cost \$_____

Initial borrowed funds \$_____ Initial cash contributed \$_____

ARV (after-repair value) estimate \$_____ Supporting comparables / date: _____

Proposed LTV _____% Value-based refinance estimate = ARV x LTV: \$_____

Other lender limits (income coverage, seasoning, loan caps, condition): _____

Estimated approved loan, subject to lender review: \$_____ Existing payoff: \$_____

Refinance fees / prepaids / required reserves: \$_____

Net refinance proceeds = new loan - existing payoff - refinance fees/prepaids/reserves: \$_____

Cash left in project = initial cash contributed - net proceeds: \$_____. Negative net proceeds mean additional cash is needed; this estimate is not a lender commitment.

Monthly rent \$_____ / vacancy _____% / monthly operating costs \$_____

Post-refi monthly cash flow = rent x (1 - vacancy) - operating costs - new monthly principal/interest - capital reserve:
\$_____

Lower ARV / delayed refi / no-refi plan and cash required: _____

Rehab walk checklist

Use the walk to scope questions for qualified specialists.

Property / date / inspector or contractor: _____

☐ Photograph and label visible issues with permission. Do not enter unsafe areas or disturb suspected hazardous materials.

☐ Ask qualified inspectors about structure, foundation, roof, drainage, water intrusion, and site conditions.

☐ Review electrical, plumbing, HVAC, water heating, and safety systems with licensed specialists where needed.

☐ Record interior and exterior repairs, appliances, access issues, and code or permit questions.

☐ Separate safety and required work from optional upgrades. Confirm rental-readiness requirements.

☐ Obtain written scope, quantities, exclusions, permits, bids, and schedule dependencies.

☐ Include contingency, carrying costs, utilities, insurance, and change-order approval rules.

☐ Check contractor references, licensing/insurance as applicable, and payment milestones.

Priority item / estimated cost / source / unresolved risk: _____

This checklist does not replace a property inspection, engineering review, or environmental assessment.

Appraisal prep checklist

Organize factual records without assuming a valuation outcome.

- ☐ Ask the lender what documents may be submitted and how the appraisal process works.
- ☐ Prepare a factual property summary with permitted use, layout, and verified measurements or source.
- ☐ Gather permits, final approvals, dated before-and-after photos, and itemized completed work.
- ☐ Keep receipts and paid invoices. Cost of work is not necessarily equal to added value.
- ☐ Organize leases, rent roll, and operating records if requested by the lender or appraiser.
- ☐ Identify relevant comparable properties with dates and differences; do not cherry-pick only the highest values.
- ☐ Arrange authorized access, utilities, and safe inspection conditions.
- ☐ Record unfinished work and material defects accurately. Never conceal adverse information.
- ☐ Review the resulting report for factual errors through the lender's process. Respect appraiser independence.

Documents still needed / owner / due date: _____

Refinance timeline checklist

Work backward from the loan maturity and your cash runway.

Target refinance date: _____ Existing loan maturity: _____ Cash runway: _____

Early planning: ask lenders about seasoning, title, occupancy, income coverage, loan size, and documentation requirements. Record requirements in writing.

Before rehab begins: confirm permits, scope, funding, and any completion conditions. Plan an exit that does not depend on a refinance.

During rehab: track costs and changes; retain paid invoices and inspection approvals. Update the cash runway.

Before application: assemble leases, insurance, financial records, entity/title documents, payoff details, and property information requested by the lender.

During underwriting: track appraisal, title, conditions, rate-lock terms, expiration dates, and any new cash requirement.

Before closing: review final loan terms, fees, prepayment provisions, cash to close, payment schedule, and reserve requirements with appropriate professionals.

After closing: reconcile proceeds and payoff; update debt service and reserve plans; calendar reporting and maturity dates.

Delay trigger / backup action / decision deadline: _____

No stage or date guarantees approval, value, rate, proceeds, or closing.

Questions for a CPA

Bring records and questions, not an assumed tax outcome.

- ☐ What records should I keep for this property, and how should ownership and activity be documented?
- ☐ How should I distinguish repairs, improvements, acquisition costs, and financing costs in my records?
- ☐ What information do you need to evaluate depreciation, placed-in-service dates, and land allocation?
- ☐ Which limitations or classifications could affect the treatment of my rental activity in my circumstances?
- ☐ What should I discuss with you before a refinance, ownership change, property sale, or exchange?
- ☐ How should I track mixed personal/rental use, travel, management time, and shared expenses if relevant?
- ☐ Are there federal, state, or local filing, withholding, or estimated-payment questions I should address?
- ☐ What documents and deadlines should we plan for, and when should we revisit this review?

Records to bring: closing statements, leases, income/expense ledger, invoices, loan statements, prior returns, improvement history, and ownership documents as applicable.

CPA follow-up / records missing / next appointment: _____

This is a discussion checklist, not tax advice or a tax calculator. It contains no tax-savings estimates.
