

Conservative Rental Deal Analyzer

Property: _____ Date / sources: _____

How to use: enter your own documented estimates. Use annual figures unless marked monthly. Write percentages as decimals in calculations. Complete the formulas manually; this is not an automatic calculator.

Purchase price (P)	\$ _____
Monthly scheduled rent (M) / vacancy & collection loss (V)	\$ _____ / _____ %
Annual scheduled rent (S) = M x 12	\$ _____
Annual effective rental income (E) = S x (1 - V)	\$ _____
Annual taxes / insurance	\$ _____ / \$ _____
Annual owner-paid utilities / management	\$ _____ / \$ _____
Annual routine repairs / HOA, licensing & other costs	\$ _____ / \$ _____
Total annual operating expenses (O): sum above	\$ _____
Annual net operating income (NOI) = E - O	\$ _____
Annual debt service (D): principal + interest only	\$ _____
Annual capital replacement reserve (R)	\$ _____
Annual before-tax cash flow after reserves (C) = NOI - D - R	\$ _____
Monthly before-tax cash flow after reserves = C / 12	\$ _____
Initial cash invested (I): down payment + closing + rehab + reserves	\$ _____
Cap rate = NOI / P x 100 (P must be positive)	_____ %
Cash-on-cash after reserves = C / I x 100 (I must be positive)	_____ %
Optional DSCR = NOI / D (D must be positive)	_____ x
Optional break-even occupancy = (O + D + R) / S x 100	_____ %

NOI excludes debt payments, capital spending/reserves, depreciation, and income taxes. Do not double-count tax/insurance escrow in debt service. Cash flow here is before income tax, after the stated capital reserve. DSCR definitions vary by lender. Break-even occupancy assumes fixed costs and positive scheduled rent; above 100% means full occupancy is insufficient under these assumptions.
